

## Information on the **Three Level DEGUM Course Program**

Starting off will be with a four days 30 hours basic course, followed after 9 months (or so) by another four days 30 hours advanced course; a final course (3 days, 24 hours) will be at the end of this period. Course programs and performance as well as certificates handed out will be supervised by The German Society of Ultrasonography DEGUM.

The months between the courses, trainees are asked to go on on their own under supervision (including mail-contacts in the sense of e-learning) to their ISCUS teachers. An individualized training at the trainee`s hospitals would be helpful in the sense of supporting (and controlling) journeys with local visits (if covered by the budget). A questionnaire-based scientific evaluation project accompanying the course period and outcomes is included in the from now new starting three level courses. It will include an evaluation of all exams done by the trainees in the inter-course periods.

Such persistent projects need a good and faithful cooperation, and clear pre-course arrangements.
